McCormick (published by Wiley) starts with this simple definition and premise and goes on to declare that “the photographic portrait may well be one of the more important social tools we have.” It’s no secret that I love making portraits—it’s probably my favorite type of photograph.

~~REVIEW: Digital Portrait Photography and Lighting—Photodoto~~

Watch video: Key lighting and fill lighting for perfect portraiture. Key and fill is one of the most fundamental concepts in lighting. It’s a reliable technique not just for portraits, but for lots of different subjects. In essence a key and fill are two light sources – one slightly stronger than the other. The key light is the main light used to illuminate our subject, while the fill light provides a lift to the shadows.

Portrait lighting usually looks best when the light source is in front of the person, but off to the side. It also helps if the light source is a little higher up. Notice that the window is beside the infant and that she is placed back a bit. This is the resulting portrait. 50mm ISO 1600 f/4.0 1/500 sec.
