Problem: The idle control valve is responsible for controlling the amount of air getting to the engine when the engine is running idle. It will either not allow enough air to the engine, which could result in stalling, or allow too much air to get to the engine which results in really high revs. Check out the video below for more

Acces PDF Vauxhall Astra Problems Engine Management Light

vauxhall astra Your vehicle's engine management temp sensors measure the temperature of your coolant as it circulates through the engine. They send data to the ECU so it can determine what adjustments to make. They also may send messages to your cooling fan and temperature gauge. Sensors can fail due to moisture, dirt or vibrations; any problem with them can quickly lead to an overheated engine.
